

PLATA

PLATA DETAILS

The **PLATA** decking connector guarantees easy and fast assembly for side grooved decking boards made of wood or wood-like materials.

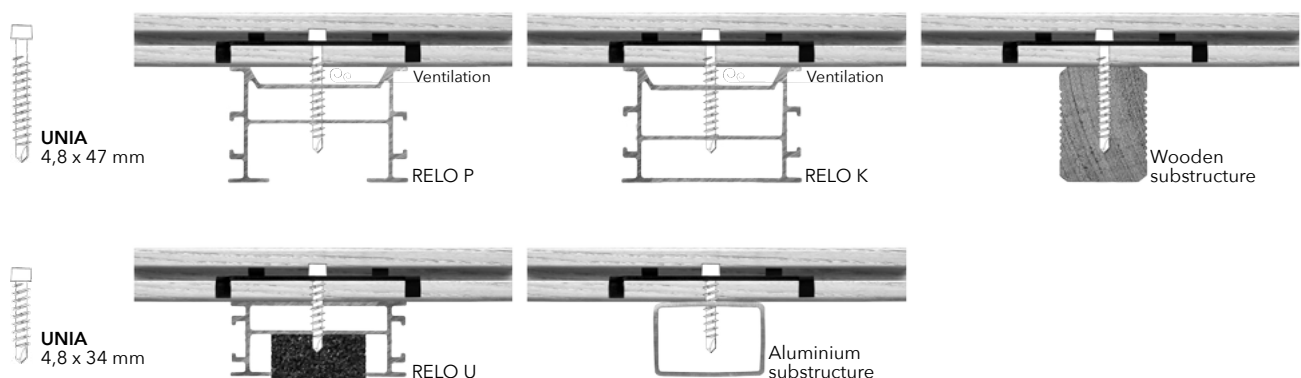

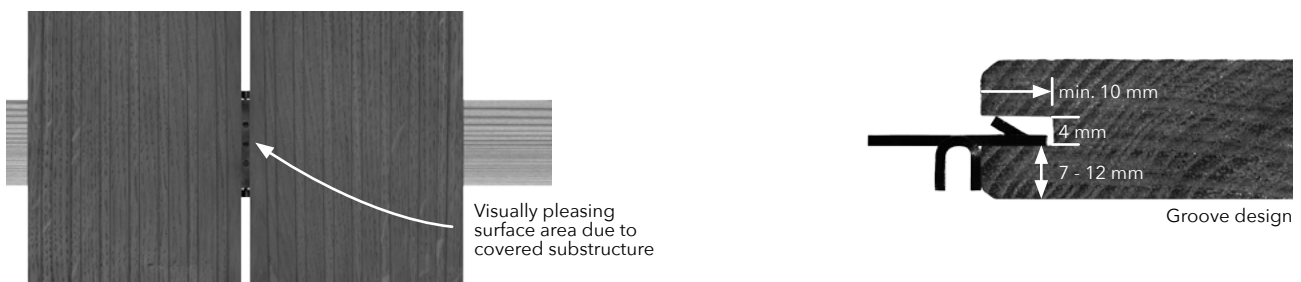

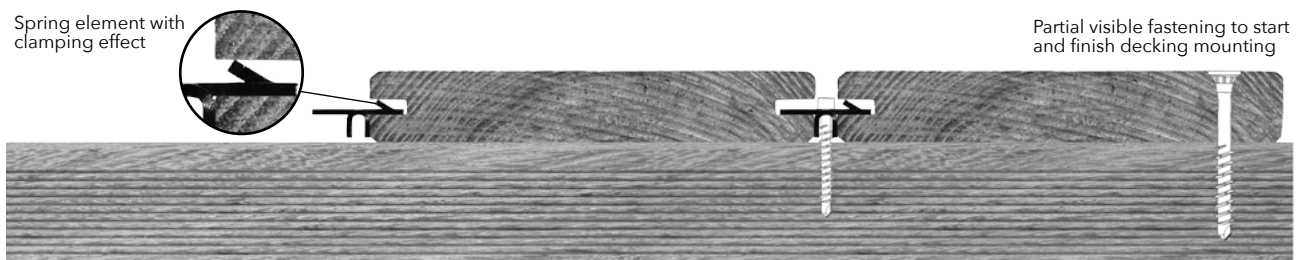

The two integrated spring elements in the groove engagement surface provide a perfect clamping effect during assembly and ensure a force-locked connection.

Thanks to the 65 mm long version, the substructure is completely concealed. This results not only in a visually pleasing surface area but also protects against dirt.

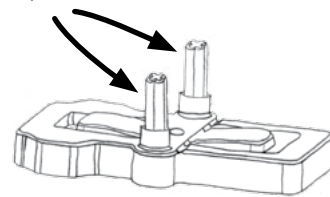

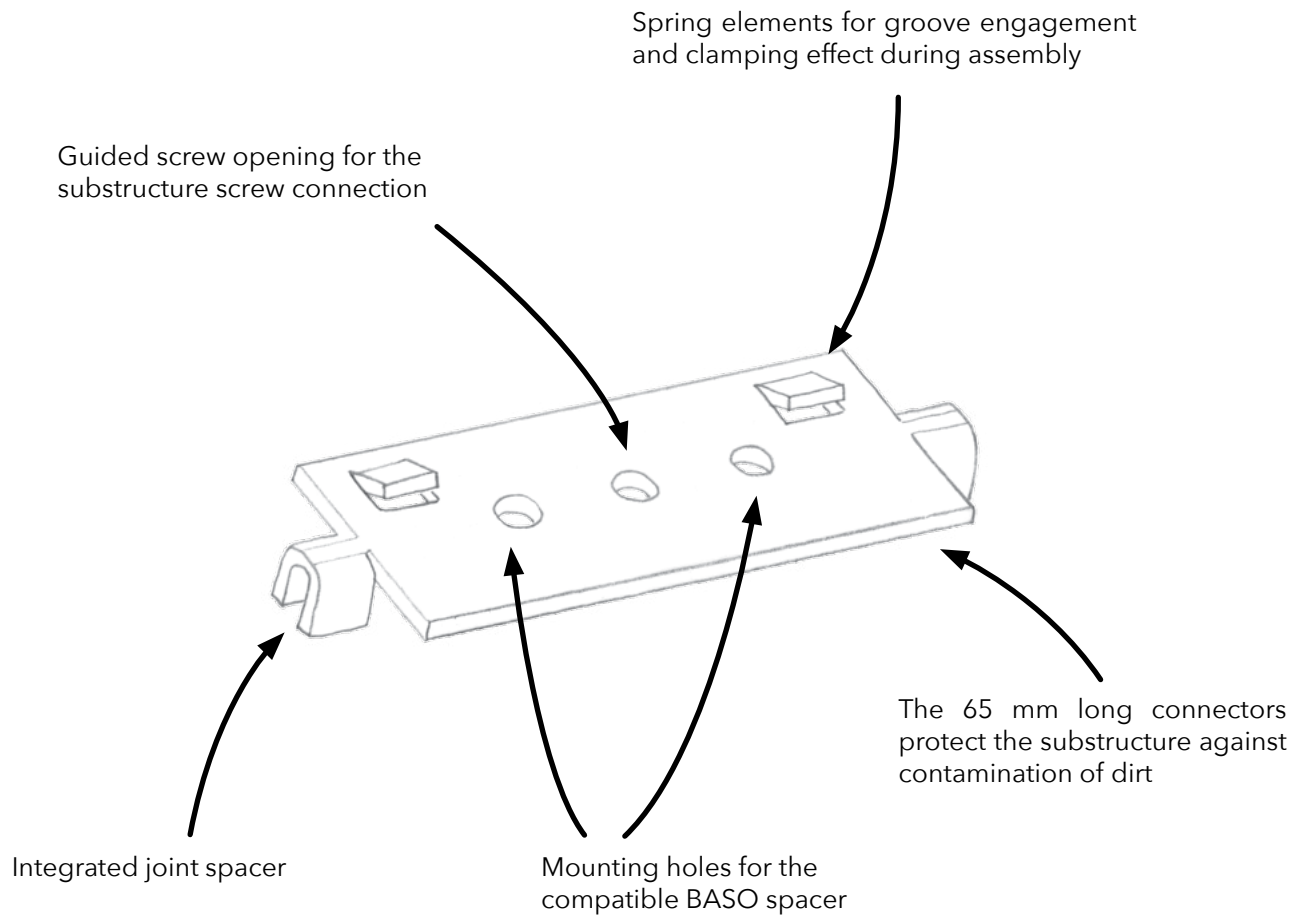

The integrated joint spacers between the individual boards simplify assembly and absorb the swelling of the decking.

The substructure may be made out of wood, wood like materials or Aluminium.

Partial visible fastening is carried out for mounting the first and last decking boards.

PLATA HIGHLIGHTS

System screw
UNIA included

including integrated
self-tapping point

OVERVIEW

Fixing:	concealed system
Fixing type:	sliding point - sliding point
Space distance:	6,0 mm
Decking board:	profiled with side groove
Wood species:	Only for decking boards with high dimensional stability
Dimensions:	L 65 mm W 24 mm
Spring elements:	with clamping effect
Board replacement:	possible
Material:	stainless steel with black coating
UNIA drilling capacity:	ca. 2 mm thick Aluminium
Special feature:	substructure is covered
